

Keying Systems

We understand that every fleet has unique security needs. That's why we offer custom keying solutions built around ABLOY® technology, ensuring that each lock meets the demands of your specific operations, whether you run a single truck or manage a nationwide logistics network.

KEYED ALIKE

Keyed alike lets you match multiple locks to one key. Each lock shares the same key code. Fleets can add locks and keys to best fit their operations.

BLENDED SYSTEM

Many fleets combine keyed alike and keyed different: one key per truck, but a different key for each truck across the fleet.

One key/multiple locks: Every Enforcer lock uses the same ABLOY® cylinder platform, so a single key can open different lock types (king pin, padlock, air cuff) as long as they share a key code.

TRUCK A

TRUCK B

KEYED DIFFERENT

Each lock is opened by its own unique key. They're often best utilized as a personal lock assigned to authorized personnel, which ensures each employee has exclusive control over his or her lock.

Maximum Individual Control: Perfect for high-value cargo or when each lock must remain exclusive.

Ideal For: Owner-operators or specific high-risk routes.

REPLACEMENTS & REKEYING

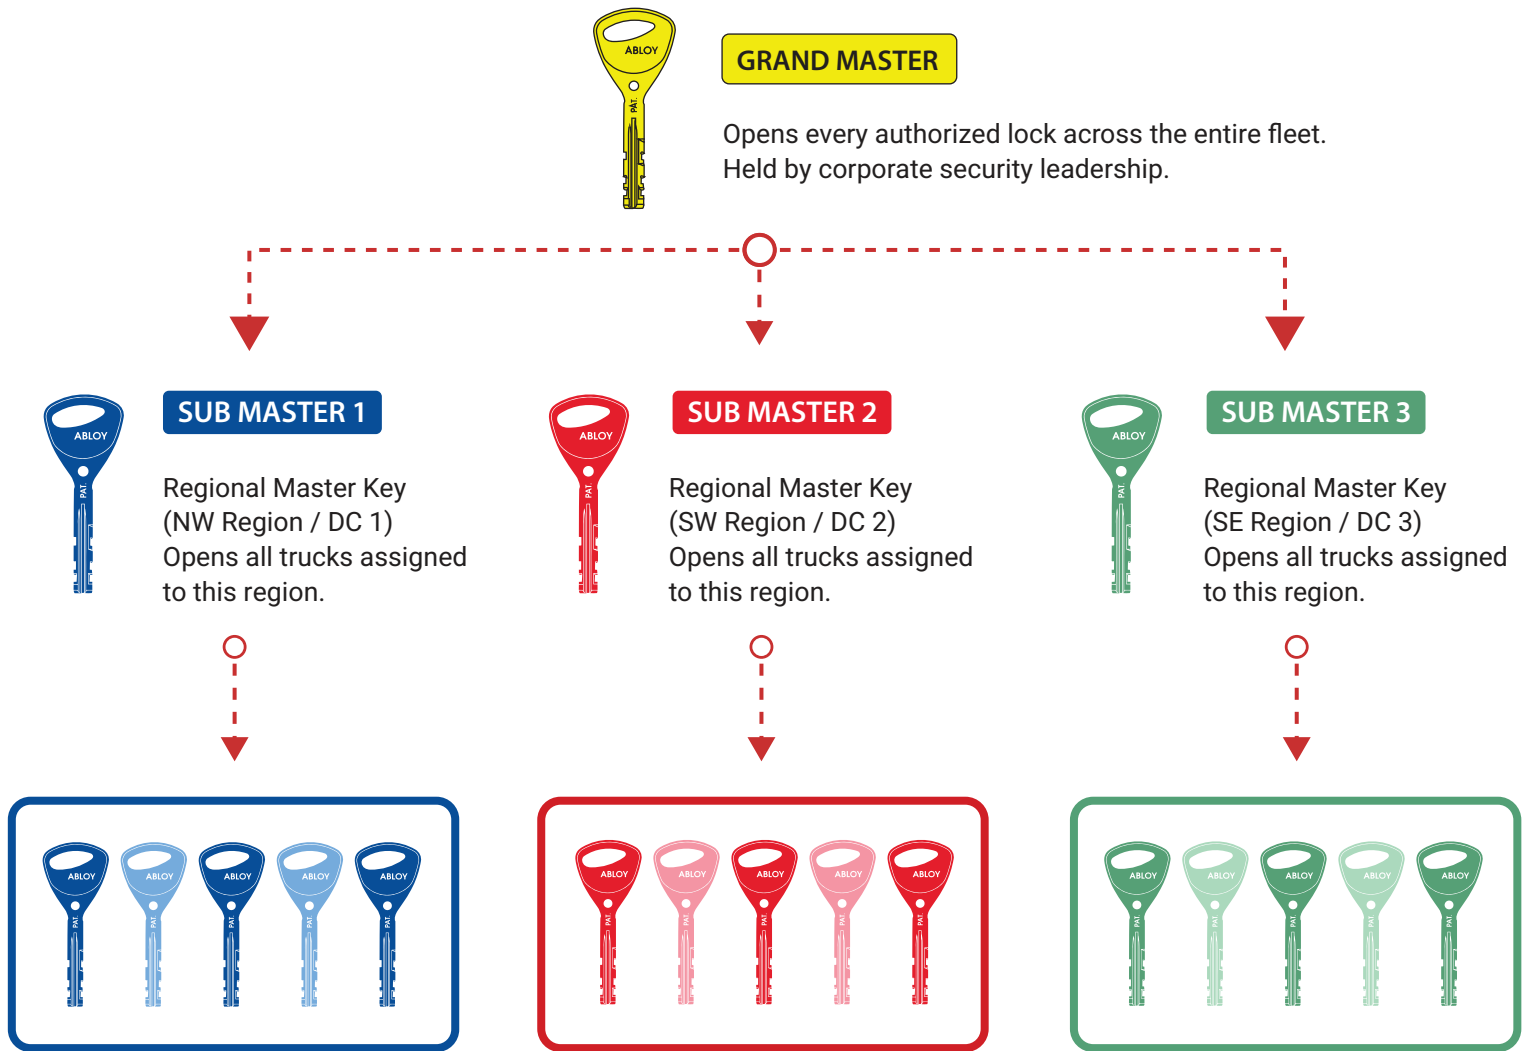

Lost or compromised key? No problem—our secure database of key codes lets us quickly process replacement orders. We also offer rekeying services if you ever need to change codes to maintain the highest level of security without purchasing entirely new locks.

ABLOY® keys are patented and cannot be duplicated commercially, ensuring no unauthorized copies circulate. Only TSI is equipped to replicate ABLOY keys, providing an extra layer of control and peace of mind.

MASTER SYSTEM

A flexible access control system allowing each lock or group of locks to have unique keys while enabling oversight with a master key that can open them all. Ideal for large fleets operating across multiple routes, terminals, or distribution centers.

Truck / Driver Keys (Keyed Different)

Each key opens the locks assigned to the truck or driver.
Keyed alike within each truck. Keyed different across the fleet.

Security & Accountability: Lost keys or employees leaving the company become less of a threat.
